

AMEREX KITCHEN PROTECTION RETROFIT OPTIONS

Upgrade with Amerex

Retrofits are easy with Amerex

Whether your customer has chosen Zone Defense coverage to allow the flexibility of future appliance changes or appliance specific coverage, Amerex strives to make sure it is easy to get your fire suppression system upgraded to meet today's standards.

- Amerex detection brackets are the same size or slightly larger than most manufacturers', allowing you to reuse or trim and reuse existing conduit. In addition, we are listed with the popular CP5 corner pulleys.

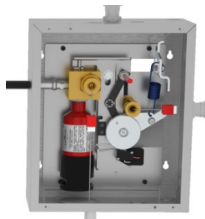

- Pull station conduit and some corner pulleys (CP5) can be reused, allowing for a quick swap with either our flush or surface mount pull station options.

- Amerex is listed with multiple brands of gas valves, including "pull to open" and "pull to close" style (including ASCO and ANSUL). This can eliminate the need for gas service involvement in some retrofits, and speed up the upgrade process for the end user. The microswitch in the MRM can even trip electrical gas valves.

- Wall mount tanks or end cabinet mount tanks allow for quick connections to existing standard agent line sizes with often only a need to change drop lengths and nozzles. Amerex also offers wall mount stainless steel tank covers when the looks are being upgraded as well.
- Amerex is the only company to offer three detection methods that each have unique advantages to meet your customers needs:

- Mechanical—MRM
- Pneumatic—PRM
- Electrical—STRIKE
